SUMMARY

A final-year Computer Engineering student , with strong expertise in IoT and embedded systems, complemented by a solid foundation in software development and web technologies. Proficient in designing and implementing IoT solutions using microcontrollers, sensors, and communication protocols, as well as developing web and mobile applications. Eager to contribute to innovative projects by applying technical skills and gaining hands-on experience in a professional environment.

EDUCATION

Bachelor's in Computer Systems Engineering

Faculty of Sciences Tunis

Current

Manar , Tunis

Skills

- **Software Development** : Java,HTML/CSS, BOOTSTRAP ,JS ,Angular ,Springboot, PHP MySQL ,C,C++,OOP Programming ,Android Development with JAVA ,VCS:Git , Typescript , React, mySql , Mongoddb .
- **Embedded Development and IOT** :Developed expertise in IoT by configuring sensors, programming NodeMCU (ESP8266) microcontrollers, and enabling device connectivity via Wi-Fi to transmit data to servers. Proficient in utilizing **RESTful APIs**, **JSON**, and **WebSocket** for secure, real-time communication between connected devices and backend servers. Implemented communication protocols such as **MQTT** and **CoAP** while integrating platforms like **ThingSpeak**, **Beebotte**, and **Azure IoT Hub** for data collection and visualization. Leveraged **Grafana** for monitoring and managing network performance.

PROJECTS

IoT Temperature and Humidity Monitor | Technology Stack Used

- * Developed an IoT-based temperature and humidity monitoring system using the ESP8266 microcontroller and DHT11 sensor for environmental data acquisition. Created a web interface to display real-time data using **Arduino IDE**, enabling seamless monitoring.

ChampionZone | Technology Stack Used

- * Collaboratively built a responsive web application using **HTML**, **CSS**, **Bootstrap**, and **JavaScript**. Implemented login and signup features with **PHP** and **MySQL**, ensuring secure user creation and input validation. Managed version control and task synchronization with **Git** .

Amazon clone | Technology Stack Used

- * Developed a dynamic e-commerce web page using **JavaScript** and applied the **Model-View-Controller (MVC)** design pattern. Added functionalities for managing a cart, including adding and removing products, updating payment summaries based on delivery options, and performing unit and functional tests with the **Jasmine** framework

E-commerce Web Application | Technology Stack Used

- * Developed a full-stack e-commerce application (Admin interface) using **Angular** for the front end and **Node.js** for the back end.
- * implemented **RESTful API in Node.js**, initially using a JSON file as the database
- * Developed CRUD endpoints for product management, optimized for pagination and real-time updates
- * Ensured seamless API interactions between Angular and Node.js servers using **Express.js** and **CORS**
